

# Iron On T-Shirt Transfer

- For Inkjet Printer

Weight : 170gsm    Size : A4 (5 sheets)

## Make Your Photo T-Shirts

Make your own photo t-shirt, using Iron-On T-Shirt Transfer Paper. You can print any image or photo using an ink jet and you can easily apply it onto any textile.

1. Make a transfer design in the desired size and shape using your computer. Enhance the quality of the image and adjust to the proper level (720 ~ 1440 dpi). Reverse the image (important in cases of wording; the face down side should be applied to the skin surface).
2. Set the paper condition to "Photo Paper" or a similar option.
3. Print the image using an inkjet printer.
4. Cut out the image using a pair of scissors or a craft knife. Leave a border of approximately 5mm around the image.
5. Place the t-shirt on an ironing board and place the printed face down onto the t-shirt.
6. Set the iron to the highest possible temperature.
7. Iron for 15-20 seconds to fuse the fabric together.
8. Wait until the fabric has completely cooled before removing the patterned backing paper.
