

\*\*You can apply it the same way on other material such as ceramic tiles, glass mugs, glass tiles, metal plates, coated wood and acrylic plate etc. Do not use it for exterior products as water based inkjet inks can be easily faded off by sunlight.

**\*Information**

1. Initial hardness of the decal may be weak, but will harden over time. Do not use strong metallic scraper or scourer to wash it.
2. The transferred images should not be in direct contact with food or beverage.
3. Do not keep decaled item in water for more than 10 minutes.
4. Do not boil it as decal may soften, use cold water when washing. This product is microwave safe but not dishwasher safe.
5. Do not wash with volatile thinners such as MEK, Xylon, acetone, alcohol etc.

## **FAQ**

Q: I get air bubbles or excess water underneath the image.

A: When you rub with a squeegee (or wet tissue), do it softly from the center to the edges, and make sure the edges decaled well before drying the mug.

Q: I get air bubbles between coating film and decal film.

A: Slow down the speed when laminating. Raise temperature a bit if your laminator has a fixed speed.

Q: Yellowy spots and less gloss than expected.

A: Wash, remove all excess glue left on the image using wet tissue before baking.

Q: The edges of image are shrunken when baking.

A: The baking temperature applied was too high or the decaled image was not dried enough before baking.
