Candle Decal Paper

For Laser Printers

Cost Saving & Easy To Apply!

Description

Make your own customised decals for christening candles or any other memorable events. All you need is a PC and a laser printer. This decal paper is especially **thin and adheres well to candles without curling at the edges**, which makes the edges of the decal almost invisible. Save costs and make the job easier with this product, as you can apply your designs individually, piece by piece, instead of wrapping the decal around the candle. We recommend you to keep the decal size small as it gets harder to apply when the size gets bigger.

Paper Thickness: 170gsm

Size: A4

Colour: **Clear** for bright coloured items

How To Use

1. Edit the images or photos which you want to print on the decal paper
2. Get rid of the tissue paper and load your printer with your laser water-slide decal paper.
3. Print the image from your computer onto your laser water-slide decal paper with your laser printer (**avoid SAMSUNG printers**).
4. Cut out the image you want with home scissors.
5. Place it in **cold** water (**do not use warm water**) for about 60 seconds and then transfer it onto surface of material you wish to decorate. Wipe excess water off your decal transfer using gentle strokes with a rubber Scrubber.
6. Allow the item to dry for at least 3 hours before use. The adhesion gets stronger and the edges become almost invisible as it dries.

If you want better gloss and hardness, you can apply overcoat using a polyurethane spray.

If you want to put the decal on a dark colour surface (such as black, cobalt blue, choco brown) we suggest you to use our white decal paper instead of this clear decal paper.
